

**FEATURES**

- Enclosure constructed of rugged 20 gauge steel
- Available in 6, 12 or 24 Volt with wattages ranging from 120-360 Watts with knockouts for side mounted heads allowing for up to 4 lamp heads per unit
- Charge rate/ power "ON" LED indicator light with test button
- AC lockout for ease of installation and installer protection
- Low voltage disconnect eliminates deep discharge
- Brown-out, short circuit and voltage surge protection
- Maintenance-free lead calcium battery
- Optional NiCad battery available
- Optional Guardian Self-test/ Self-diagnostics (G2) available
- Optional time delay (TD) feature available
- Standard finish: Black or White
- 120/277V Dual primary, 60Hz input
- CSA listed 90 minute emergency run time, 24 hour recharge time
- Assembled in the U.S.A.

**WARRANTY**

Any component that fails due to a manufacturing defect is guaranteed for three years with a separate three year pro-rated warranty on the battery. The warranty does not cover physical damage, abuse or instances of uncontrollable natural forces. See the full Exitronix warranty document for detailed information.

**ORDERING INFORMATION Example: RS12-200-T1218-2-W-G2**

Series	Wattage	Lamp Heads <sup>1</sup>	# Of Lamp Heads	Finish	Options (Factory Installed)
RS6 = 6 Volt Lead Calcium	<b>6 Volt, Lead Calcium</b>	<b>6 Volt Tungsten Wedge Base</b>	0 = No Lamps	W = White	G2 = Self-test/Self-diagnostics
RS12 = 12 Volt Lead Calcium	120 = 120 Watts	T0609 = 9 Watt	2 = 2 Lamp Heads	B = Black	LC = 3' Line Cord
RS12N = 12 Volt NiCad	200 = 200 Watts	<b>6 Volt Tungsten Sealed Beam</b>	3 = 3 Lamp Heads		TD <sup>2</sup> = Time Delay
RS24 = 24 Volt Lead Calcium	<b>12 Volt, Lead Calcium</b>	R0618 = 18 Watt	4 = 4 Lamp Heads		
RS24N = 24 Volt NiCad	180 = 180 Watts	R0625 = 25 Watt			
	360 = 360 Watts	<b>12 Volt Tungsten Wedge Base</b>			<b>Accessories<sup>3</sup> (Field Installed)</b>
	<b>12 Volt, NiCad</b>	T1209 = 9 Watt			WG-A = Wire Guard (Back Mount)
	130 = 130 Watts	T1212 = 12 Watt			XG-PS = Poly Guard (Back Mount)
	200 = 200 Watts	T1218 = 18 Watt			
	<b>24 Volt, Lead Calcium</b>	<b>12 Volt Tungsten Sealed Beam</b>			
	280 = 280 Watts	R1212 = 12 Watt			
	360 = 360 Watts	R1218 = 18 Watt			
	<b>24 Volt, NiCad</b>	R1225 = 25 Watt			
	200 = 200 Watts				

**Notes**

<sup>1</sup> Alternate lamp heads are available, see Remote Lamp Heads specification sheet or consult factory

<sup>2</sup> Not available on units with NiCad battery

<sup>3</sup> Order as separate line item

## CONSTRUCTION

The RS series is die-formed 20 gauge steel housing with epoxy powder coat finish. White finish is standard. Universal J-box mounting patten and keyhole slots provided for simple installation. Knockouts are provided on top, back, and sides for easy wire entry. Can also be shelf mounted – ordered separately.

## ILLUMINATION

Fully adjustable, attractive lamp heads allow for maximum light to be delivered to the path of egress. Up to 4 lamp heads may be installed on each emergency unit. Emergency lights vary – see ordering information for details. The RS series is RENEGADE compatible – 3.6W LED per head.

## ELECTRICAL

### Input

Dual-voltage input 120 or 277VAC @ 60Hz.

### Sealed Lead Calcium Battery

Extronix sealed lead calcium batteries are maintenance-free and perform optimally in temperatures ranging from 15° to 40°C (59°F to 104°F).

### Sealed Nickel Cadmium Battery – NiCad (Option: NC)

Extronix sealed nickel cadmium batteries are maintenance-free and perform optimally in temperatures ranging from 0° to 40°C (32°F to 104°F).

### Emergency

The RS series exit will operate for a minimum of 90 minutes during a loss of power with a 24 hour maximum recharge time for the battery.

### Brownout Circuit

The brownout circuit monitors the flow of AC current to the unit and triggers the emergency lighting system once a set reduction of AC power occurs. This dip in the voltage will cause many fixtures to extinguish causing loss of normal lighting even though a total power failure has not occurred.

### Low Voltage Disconnect

When the battery's terminal voltage falls below predetermined levels, the low-voltage disconnects the emergency lighting load. The disconnect remains in effect until normal power is restored, preventing deep battery discharge and improving the life of the battery. The disconnect will also automatically reconnect the load circuit once the battery voltage returns to a normal value after charging.

### Solid-State Transfer

The unit features a Solid-state switching transistor which eliminates damaged contacts or mechanical failures associated with relays. The switching circuit is designed to detect a loss of AC power and automatically energizes the lamps. Upon restoration of the AC voltage, the emergency lamps will switch off and the charger will automatically recharge the battery.

### Overload and Short Circuit Protection

The Solid-state overload monitoring system in the DC circuit disconnects the lamp load from the battery should excessive wattage demands be made and automatically resets when the overload or short circuit is removed. This overload current protective characteristic eliminates the need for fuses or circuit breakers for the DC load.

### Test Button

Our easily located test button allows for manual verification of proper operation of the transfer circuit and emergency lamps.

## INSTALLATION

A universal mounting pattern and rear keyhole slots are provided for wall mounting.

### Made in the USA (STANDARD)

Many of our products can be produced or transformed to comply with the American Recovery and Reinvestment Act of 2009 (ARRA) requirements and Buy American provisions. These fixtures meet LEVEL 1 Compliance when option is requested – please call factory for details with questions.

### Guardian Self-test/Self-diagnostics (Option: G2)

The Guardian circuit continuously monitors the operating condition of the AC power, battery supply voltage, emergency lamp continuity and charging circuit.

The purpose of this option is to provide visual signaling in response to a fault at the EXIT sign battery and/or battery charger. If a failure is detected, visual status will occur immediately via the CHARGER LED and/or the BATTERY FAULT LED. The LEDs will stay illuminated until the fault is corrected.

The Guardian circuit also monitors the transfer circuit as well as performing automatic code compliant testing. The Guardian circuit will perform a 30 second discharge and self-test every 28-30 days. A 90 minute discharge and self-test is performed every 6 months.

### Time Delay (Option: TD)

The purpose of this feature is to allow additional time for “normally on” fixtures to return to full brightness prior to extinguishing the supplemental light from the emergency fixtures.

## CONFORMANCE TO CODES & STANDARDS

The RS Series is CSA Listed and meets or exceeds the following: UL 924, NEC requirements and NFPA 101.
