

NEW Adjustable Swivel Mount For the RXA Series

Trace-Lite's new RXA swivel mount allows up to 270° rotation from left to right. Mounting two fixtures back to back on a pole and pointing in the same direction is ideal for front row automotive applications.

The swivel mount also allows for the fixture to tilt up and down to maximize lights forward throw and can be mounted to pole or wall-mounted for a cost-effective solution to add flexibility to your next lighting project.
